Summary: "@RISK is a risk analysis add-in to MS Excel spread-sheet program or MS Project. It supports over 30 different distribution types including Normal, Triangular, Lognormal, Beta and Uniform. Reporting facilities include the usual description statistics for an unlimited number of output variables and graphics including frequency and cumulative distribution graphs. Ideal for the assessment of project cost risk due to its simple interface with standard spreadsheet features."

Platform: MS Excel /Project, Pentium+, 32MB RAM Win 95,98,NT,2000 ,XP

Demo: Downloadable or issued on a trail CD ROM.

Price: £450(std), £650(Prof), £950(Industrial)

UK Supplier(s):

Summary: "The Active Risk Manager system is an enterprise solution developed using the latest but proven web enabled technologies which will allow business/project managers to identify and manage risks across many interrelated projects or organisation breakdown structures at any one time. ARM provides full integration with the most widely used groupware and project management systems

The system can map any size of project or business breakdown structure, and provides the capability to manage and gain secure access to risk information across all levels of your business. The breakdown structure formats are generated from real-time integration with planning and requirements management tools. Any number of interrelated projects can be linked together in the overall Business/Project Breakdown structure. The system provides Automatic Notification of any risks, which may no longer be relevant due to changes in the projects or requirement breakdown structures.

Global parameters related to levels of acceptable risk can be set and through the use of 'traffic lights', highlight areas of unacceptable risk. This tool will allow senior management to 'drill down' through the structure and find the root causes for high levels of risk without wasting time and resources.

The system combines a number of qualitative and quantitative assessment functions aimed at reducing the time taken in gaining an understanding of the potential risk impact. The provision of the facility for Intranet/Internet/Extranet publishing, and secure access to information and status, will enable the remote access of real-time risk information by team members, managers or authorised clients who may be at different geographical sites."

email: John.knott@JKAL2000.fsnet.co.uk

Website:

UK Supplier(s):

Summary: BORRIS (Business Objective & Requirement Risk Information System) has been designed primarily as a corporate governance risk tool for Small and Medium Size Enterprises but also serves a dual function as a project management risk tool. To facilitate and accelerate the identification of risks, BORRIS starts at a high level requirement and provides a four level breakdown facility to identify derived requirements at which risks may be readily identified and managed. Whilst BORRIS provides no internal probabilistic analysis it does provide output to Microsoft Excel for which a simple analysis tool is provided. An audit facility to ensure completion and authentication of requirements breakdown is an essential feature of the tool. Features include a Risk cause/effect matrix allowing the user to identify common causes of risk for optimum risk management effectiveness.

Platform: Windows XP

Demo: John Knott Associates Ltd

Price: £500 inclusive of Basic Risk Management and Software specific training.

Support: Telephone during normal working week.

Summary: CRAMM is today's most comprehensive and most widely adopted method for information security risk management and for BS 7799 compliance and certification. The Government's preferred risk assessment methodology, CRAMM is a total information security toolkit that includes an 'Express' facility, that delivers a 'high level' yet thorough risk assessment in less than 2 hours. Containing in excess of 3,000 security controls covering all aspects of information security, that can be reviewed in their own

right, CRAMM Version 5 also provides a set of tools to help in achieving certification or compliance against BS 7799. This includes the new, mandatory, requirements in Part II of the standard for risk treatment reporting and it delivers all of the documentation required for certification. CRAMM is now implemented in some 600+ sites in over 500 organisations throughout the world and use by them to support reviews of controls on existing systems, specification of controls on new systems and decision support for security improvement proposals. Functions are also provided that support compliance checking, business continuity management, production of UK Government Accreditation Documentation Sets (ADS) and Security Improvement Plans. Derivative tools are available for specific environments such as Healthcare and for specific clients such as NATO. International language versions are also available.

Platform: Minimum: 800 MHz Processor & 64 M Memory. Windows XP, 2000, NT, Me & '98

Risk Tool Simulation Model
Type:

Product: **Dependency Modelling (DM)**

Version:

Developer: **Dependency.Com / Concept Laboratories Ltd.**

UK Supplier(s): **Dependency.Com**

1, Leonard Pulham House,

Tring Road, Halton,

Aylesbury, Bucks. HP22 SPN UK
Tel: +44 (0)1296 6963
Fax: +44 (0)870 1255
email: chris.baker@dependency.com
website: <http://www.dependency.com>

Summary: Dependency Modelling (DM) is a risk analysis methodology supported by software tools. DM enables the user to build rich models of an organization's objectives and identify, in appropriate levels of detail, what those objectives depend upon for success. The linking of risks to corporate objectives enables buy-in up and down the management chain. The objective might be the achievement of Key Performance Indicators, the successful completion of a project or the smooth running of a system or process.

Once the model is built the user can then make quantitative and qualitative statements as to the likelihood of failures and the impact of those failures should they occur. Once the dependencies and real risks to the objectives are known, a balanced portfolio of alternate strategies, controls, countermeasures and backup systems can be justified and deployed to reduce risks to an acceptable level. The process has been used to satisfy regulators that a capital expenditure budget of £1.5billion could be reduced by 40% without increasing the risk to the business or its customers.

This approach is able to both justify expenditures on risk reduction measures and save wasted expenditure where such measures are not required or are over-compensating for the probable losses.

Fax: 708 810 4151

email: sales@decisivetools.com

Website: <http://www.decisivetools.com>

UK Supplier(s):

Summary: "Use iDecide to create influence diagrams for the issue you need to model. iDecide comes with an extensive set of models addressing many common business situations. You have the option of customising one of our models to match your situation or building your own model from scratch. The influence diagram is a graphical presentation of the model with nodes representing each of the pertinent factors. Each factor can be assigned a specific value or a range of values. Lines called edges connect the nodes and show the relationships between the different factors. Once you've created your influence diagram, you can model it using the Monte Carlo simulation. The result is a statistically accurate representation of the range and liklihood of all possible outcomes."
Please note that Decisive Tools (iDecide) brought Definitive Scenario (DynRisk).

email: alex@nickleby.com

Website: www.nicklebykit.com

UK Supplier(s):

Summary: NicklebyKIT is a software tool to support management of project issues. The tool is aimed at professionals who are responsible for managing or conducting projects. KIT focuses attention on key business issues. Users benefit through confidence that decisions are properly informed by knowledge of the issues involved backed by awareness of the organisations broader experience. NicklebyKIT provides a comprehensive set of features to support capturing assessing and managing issues and tracking actions. It tracks links between issues and identifies when changes in one issue has knock-on effects on others. Users can raise and track actions associated with issues and generate action summary reports. It keeps a record of major changes to issues providing traceability. NicklebyKIT allows different roles in a project team - project manager team leader and project members - to approve issues when they believe the details are correct. Once a manager has approved an item it cannot be changed again

without the manager knowing. NicklebyKIT helps identify experience and lessons learned from related or similar projects. A supporting project part funded by the DTI under an innovation award is developing a highly innovative approach to developing an organisations Corporate Memory and making it accessible to NicklebyKIT users. In the five years of research and development behind NicklebyKIT Nickleby has gained a great deal of experience in the process of identifying documenting and managing issues. Much of this is reflected in the design of the software

Website: www.bmtrel.com

UK Supplier(s):

Summary: "PANDORA is the preferred Project Risk Management Database of the Defence Procurement Agency. Originally developed by the then MOD(PE), PANDORA is now distributed and supported by BMT Reliability Consultants Limited. PANDORA has a wide range of features to support all stages of the risk management process, from identifying risks, through analysing their impact, putting mitigating plans and actions in place, and monitoring the risks throughout the life of the project. For each risk, PANDORA records the project and stage to which it relates, the probability of occurrence, and the levels of impact on time, cost and performance. The risk manager can also set target levels for the risk which are expected to be achieved once the mitigating actions have been completed, and PANDORA maintains a log of changes to the risk status as the project proceeds. To provide a record of the current status of the risks, PANDORA can produce a printed risk register, as well as a report combining the risk details and the mitigating actions. PANDORA's Risk Management Information System (MIS) provides a summary of the level of risk in a standardised, easily understood format which includes pie charts of current and target risk levels. PANDORA is a powerful and comprehensive Project Risk Management database, suitable for a wide range of Defence and Commercial applications."

UK Supplier(s):

Summary: " Precision Tree is the Decision Analysis Add-In for MS Excel. Build decision trees and influence diagrams in your spreadsheet! Create diagrams easily by selecting cells in your spreadsheet and clicking node buttons at the Precision Tree toolbar. Enter probabilities and payoffs directly in cells in your tree. With one click, Precision will run a powerful decision analysis on your model, determining the best way to proceed with your decision. A decision analysis in Precision Tree generates a Risk Profile. The Risk Profile compares the payoffs and risk of different decision options. The cumulative risk profile graph displays a cumulative distribution showing the probability of an outcome less than or equal to a certain value."

Platform: IBM PC compatible 386 or higher, MS Windows 95, NT, 3.x, 98; MS Excel 5.0-8.0; 8M

Demo: Downloadable from the website or on request from Palisade Europe.

email: enquiries@riskdecisions.com
Website: <http://www.riskdecisions.com>

UK Supplier(s):

Summary: Predict! Risk Controller is a powerful database application that enables organisations to implement robust and consistent risk management at every level: business unit, function, project, programme, collaborative project or joint venture. It provides the benefits of a commercial-off-the-shelf (COTS) package, with the flexibility to configure the application to support existing processes.

Three interfaces to the Risk Controller database (web, client-server, MS Excel) enable organisations to take an incremental approach to rollout and to select the most appropriate interface for different types of users or IT environment.

Risk Controller incorporates the leading quantitative schedule and cost risk analysis tool, Predict! Risk Analyser. The result is an extremely powerful toolset that removes the need to need to transfer data from one package to another. Risk Controller links to all the leading planning and requirements tools.

The Predict! software is supported by Risk Decisions' comprehensive range of consultancy, training and implementation support services.

Platform: Windows 95/98/2000/NT/XP

UK Supplier(s):

Summary: Predict! Risk Controller Lite is a MS Excel-based interface to Predict! Risk Controller. Together they deliver major benefits for organisations seeking to implement a robust and effective risk management process across an enterprise or multifaceted project programme. Risk Controller Lite enables sub-sets of the risk register to be exported to, and re-imported from Excel. This provides the ability to review and amend risk data to those without a direct access to Risk Controller in a format with which they are familiar. Risk Controller Lite is:

- * Quick to learn and simple to use as it uses Excel
- * A professionally developed risk register in Excel, so that staff need no longer waste time developing their own spreadsheets
- * Configured by Risk Controller, so that risk and mitigating action data are captured in a structure consistent with your overall risk management process
- * Synchronised with Risk Controller through automatic upload/download, so that the central risk database is quickly updated for overview reporting and risk analysis
- * Configurable to enable you to share data easily between your risk register and those of your customers or suppliers, with the added security of an 'air-gap'
- * Proven as an easy migration route from existing risk registers or databases

Platform: Windows 95/98/2000/NT

Website: <http://www.riskdecisions.com>

UK Supplier(s):

Summary: Predict! Risk Analyser is a purpose-built cost and schedule risk analysis software tool that models the effects of uncertainty, risks and opportunities associated with your business plans, programmes and projects. Predict! Risk Analyser:

- * Gives you, and your stakeholders, confidence that your plan is robust, and your management controls are adequate
- * Helps you avoid over-optimism by demanding a robust approach to risk management.
- * Provides sound information to benchmark your portfolio of plans, and make better

informed project and business investment decisions, on an ongoing basis.

* Helps you to avoid potential penalties (e.g. for late delivery) and identify opportunities to enhance your plans.

Intuition alone is not sufficient to prioritise risk management effort because the critical path to delivering plans and programmes requires an analytical approach – Risk Analyser gives you that approach.

Fax: 01225 448714
email: info@bmtdsl.co.uk
website: www.bmtdsl.co.uk

Summary: "The fully integrated Risk Management solution, Q2Risk seamlessly combines the functionality of a leading quantitative risk analysis package, Risk Master, with the capabilities of BMT DSL's own qualitative Risk Management System. A fully resourced project or model is presented in the tool to focus the identification of risks and to enable the generation of scenarios. Traceable and justifiable cost and duration estimates are derived from a full understanding of all the risks identified, for use in the Monte Carlo simulation. Valuable information, normally lost between separate and often incompatible tools, is fed back to indicate the relative importance of risks and the cost effectiveness of identified risk reduction measures. Mitigation plans can be fully appraised using powerful 'what-if' and 'conditional branching' functionality. A comprehensive, individually tailored report suite enables the dissemination of status and strategy at all levels from the Risk Practitioner to Senior Management to the grass roots stakeholder."

Summary: "REMIS is the complete solution to the identification, assessment and management of risk. Drawing on over fifteen years experience in assisting clients to manage risk exposure, HVR-CSL developed REMIS as a structured tool to support all stages of the risk management process. REMIS is a powerful, yet simple to use, risk management tool which aids and ensures a proactive approach to the management of risk, while ensuring that no crucial management actions are overlooked. REMIS integrates with a wide variety of other risk tools, including @Risk. Its flexible reporting formats, combined with the clear and simple approach to risk management ensures REMIS is a favourite in the industry. The new features and enhancements for version 2.75 include the following:-

- Effectiveness (Post risk mitigation targets)
- Enhanced administration capability including read only capability and data file locking.
- Contingency planning, monitoring and reporting
- Create custom reports
- User defined generic risks (Use your existing projects or develop product/industry specific risks as the source of generic risks)
- Configurable international currencies
- Email risks and actions directly to team members
- Import WBS structures to identify and set risk exposure periods
- Seamless export to @Risk and MoD risk tools "

Website: www.ris3.com

UK Supplier(s):

Summary: Whilst the existing Ris3 software continues to be available & supported, a new product is available featuring the elements defined from extensive implementations with an international customer base. Ris3 RisGen version 5.0 is the next generation software which supports an Integrated Risk Management Solution. Based upon a proven & high security web-enabled solution it is a flexible, scalable & low-inertia Risk Management & Compliance Management Solution. It is able to address a range of activities, including Corporate Governance, Project & Programme Risk Management, Internal Audit & Compliance with legislation. The solution provides for risks, opportunities & issues to be identified, managed & reported in an auditable structure. The focus for risk management has changed from risk recovery to risk prevention as a result of legislation & adoption of "Best Practice", which is evolving world-wide. This next generation development is a manifestation of a unified culture, which organisations of all sizes can integrate with their existing processes, to maximise upon their distributed knowledge & gain commercial advantage. Identifying & managing risks has become the means by which organisations can plan & manage their activities successfully. The Ris3 RisGen software product range comprises: RisGen RISK MANAGER "PERSONAL EDITION"- This single user tool is suitable for Consultants developing client registers, individual Business Managers or Project Managers looking to establish & maintain a competitive advantage. RisGen RISK MANAGER- The networked tool is scalable up to an enterprise wide solution for the management of risk. Suitable for BCP, Finance, Project & Programme Managers reporting to Project Directors, H&S practitioners, Marketing & Sales, Operations & HR. RisGen Risk Manager features a detached operation capability, enabling remote working & data synchronisation via the Internet. RisGen COMPLIANCE MANAGER- Provides an enterprise wide solution for both risk management aspects of & compliance with corporate governance legislation. In addition to all the functionality of RisGen Risk Manager, RisGen Compliance Manager has a more powerful reporting structure, which enables organisations to establish levels of authority & reporting category. Engaging this functionality the user defines the structure to view all risk down throughout the organisation, for applications such as BCP, H&S and other areas which require compliance for reporting. Financial exposure is calculated at all levels. Corporate financial exposure is reported at CEO level. Both the process & product readily provide instantaneous visibility for internal & external audit & corporate governance requirements. Tracking activities against an organisation's risk appetite reveals the trends of financial exposure & risk contingency budget necessary at any date, enabling informed management decisions to be made dynamically.

Platform: SQL Server 2000, Windows 98+ and Windows NT

Website: www.hvrgroup.com

UK Supplier(s):

Summary: "The Risk Maturity Model is a tool built using MS Access that is a development of work originally published by HVR in 1997. It has primarily been designed to support HVR's own consultancy activities in situations where an organisation is seeking to develop its own risk management capability. The tool is used to assess an organisation's current capability and identify a prioritised list of actions for improvement. There are currently 2 models, one for business and one for projects. There is a significant overlap between these and care has been taken to harmonise the use of terminology. The business model reflects the recently issued Turnbull Committee guidance for listed companies and tests for Turnbull compliancy have been included. The models each make an assessment from 6 perspectives. These perspectives include the major elements of risk management process, responsibilities and culture. The overall assessment is considered to be equal to the weakest amongst the perspectives."

UK Supplier(s):

Summary: RiskAid provides a comprehensive solution to project risk management, from bid stage to project completion. RiskAid consists of:-

- A methodical project risk management process, conforming to PRINCE-2, BS6079 Parts 1-3, the latest MoD/CTA/DoD guidelines and BSI IEC 62198.
- A secure, collaborative risk management toolset, available wherever you are
- A training workshop
- Ongoing support & consultancy.

RiskAid has been developed to support Project Risk Management by project managers. It has been particularly tailored towards supporting collaborative multi-national and dispersed teams, and won a SMART award for its innovative mathematical solution to risk management.

RiskAid supports:-

- Risk Identification, offering two methods to support both local or dispersed project teams
- Risk Assessment, establishing the chance of occurrence, potential costs and delays of each risk. Uncertainty and ranges and multi-valued estimates are supported, using fuzzy sets.
- Risk Response, identifying actions, when and how they are activated, culminating in a cost-benefited and timelined action plan. This includes an associated contingency cost profile and potential end-date delay profile, taking liquidated damages into account, to support contingency budgeting.
- Risk Management of the risks and action plan, providing all project risk management reports, including trend analyses to spot changes in perception.

Platform: Any computer with an internet browser capable of running Javascript

UK Supplier(s):

Summary: Risk-Elimin8 is a package that can be used to identify, evaluate, mitigate and manage risk. It can be used by any organisation to co-ordinate and manage Risk Assessments and the work generated by them. The system maintains relationships and dependencies for the Risk Assessments and makes this clear through an Explorer like view. The package can be used in stand-alone mode, or as part of a network. The system provides complete documentation of risks and the reduction (or mitigation) of them and progress - a powerful management tool. A powerful suite of reporting tools and functions completes the system. A Risk Matrix runs constantly in the background and can be called upon at any time to evaluate the status of the recorded risks. The benefits of the risk-elimin8 system are: - □ Risk assessment process is customised to user's specific requirements. · □ Increased health and safety in the workplace. · □ Threats to project or financial success are addressed effectively. Improved control of deliverables and deadlines. · □ Provides a consistent approach to risk management throughout the project. Identifies opportunities and lessons learnt. Risk-Elimin8 provides a rich source of information (a database of Risks, Opportunities, Mitigating factors and Lessons learnt) – capturing this knowledge and giving opportunities to save cost, time and HSE issues.

Platform: PC, 8MB of Ram, 20MB Hard Drive, Windows 98 or greater, CD-ROM, VGA Monitor
Demo: available at/from: TDM Ltd

Summary: A suite of tools designed to support the four stages of the Dynamic Risk mapping process, from simple data-gathering and structuring (RiskScan and RiskBase tools) through weighting/assessing risk factors (RiskRate tool) to brainstorming workshops and dependency analysis (RiskMap and RiskAnalysis tool). Audit and reporting activities are supported by automated document creation tools (RiskAudit and RiskReporter). Remote data gathering is made possible by the use of easily-emailed SmartSheets written in MS Excel. Simpler modules are designed with user-friendliness in mind, whilst the analysis module uses leading-edge fuzzy and neural network technology powerful enough to tackle the most complex risk scenarios. Uniquely, the system can be used where only qualitative data is available or where a mixture of qualitative and

quantitative data is present."

Summary: RiskTrak™ is a Windows-based software tool designed to analyze, manage and report risk in your organization. RiskTrak™ implements a proven, repeatable, risk management process and has been designed to easily integrate into existing project or program methodologies. As projects grow in size and complexity, risk management becomes a key factor in the overall success of a project or program. With RiskTrak™ management has the opportunity to pro-actively manage risks. RiskTrak™ provides an integrated project management process that provides a complete solution for your organizations project, program, and business needs. RiskTrak™ has many features that can not be found in any other product on the market today.

With RiskTrak™ you can always understand what and where the high risk factors are and know they are being managed. At the project level, the project manager can consistently analyze and account for risks and communicate those risks to management. At RST we are always available to answer your questions by telephone (603.672-6736) or e-mail (info@RiskTrak.com). RiskTrak™ is useful for all levels of the organization. RiskTrak™ can be used by executives to assure management that the risks have been accounted for in critical areas of a program, and analyze new opportunities. RiskTrak™ at the program level ensures consistency across all projects and provides the ability to communicate and track risks. If you need additional resources

our consultants are available to help you.

Fax: 01420 89819

email: Ian.Gunn@hvr-csl-co-uk

Website: www.hvrgroup.com

UK Supplier(s):

Summary: "TDRM is a high level risk identification and evaluation tool aimed at providing management with information during the bidding and conceptual stages of projects when little detail is known. TDRM is a very useful tool to decide on the strategy to be adopted for each potential bid or project.

TDRM ensures a consistent approach to normalise bids and projects being assessed for risk. TDRM will assist you to quickly identify the overall risk exposure enabling key business decisions to be made in a cost effective manner. This assessment can be used to assist in the bid/no-bid decision and to identify if further analysis is desirable."
